1 Introduction

How to visualise your better?
    Choose the right type of chart for your data.

- **line charts** - track changes or trends over time and show the relationship between two or more var

- **Bar charts** to compare quantities of different categories

- **Scatter plots** - joint variation of two cont varies

- show additional vars on a 2-D plot using colours

- **pie charts** - Compare parts of a whole but with proportion, but used rarely since people have a hard time comprehending size of them
